What Do We Know about COVID-19 and Child Care Settings?

Current Public Health Guidance

As the pandemic evolves, the North Carolina Department of Health and Human Services (NCDHHS) is applying the most effective and appropriate public health tools for the current phase of the pandemic. As the United States and North Carolina emerge from the latest surge, the COVID-19 landscape looks different today than it did two years ago or even two months ago. More has been learned about the virus and effective tools to reduce the risk to people. Based on the emerging science and evidence, NCDHHS is adapting its guidance to allow North Carolinians to get back to the people, experiences, and places they love.

- Vaccines and boosters are widely available and help protect against severe illness, hospitalization, and death.
- Treatment is available for those at higher risk of severe disease.
- Trends are decreasing, lowering the risk of infection, and improving hospital capacity.

At this phase in the pandemic, NCDHHS recommends that child care programs:

- Promote vaccinations and boosters for children and staff by providing accurate information and connecting them to vaccination providers.
- **No longer utilize universal mask requirements in schools or other lower risk settings like child care programs.**
- **No longer require wearing of masks on buses or vans operated early care and education/child care providers, based on the updated CDC guidance released on February 25, 2022.**

An important tool for slowing the spread of COVID at earlier points in the pandemic has been formal contact tracing – identification, notification, and guidance by local public health authorities for individuals who have been exposed to COVID-19. While contact tracing remains important in certain high-risk settings, such as long-term care facilities and homeless shelters, formal contact tracing is a less effective tool in other settings, such as child care facilities because:

- New COVID-19 variants have emerged which have a shorter incubation period and are more contagious.
- Individuals with the newer COVID-19 variants are most contagious prior to the start of their symptoms and during the first few days of illness.
- A large number of individuals who have COVID-19 do not have symptoms and have less severe illness.
- Many infections are never identified by local public health departments because individuals with asymptomatic or mild cases may not get tested. Many individuals are also using over the counter at-home tests which do not get reported to the local public health department.
- In most instances, people are most contagious before their test results are known.

For these reasons, formal contact tracing may not be limiting the spread of COVID-19 in child care settings and is no longer recommended by NCDHHS.

The emerging data is described in CDC’s [Science Brief: Transmission of SARS-CoV-2 in K-12 Schools and Early Care and Education Programs](https://www.cdc.gov/coronavirus/2019-ncov/healthcare-settings/k-12-schools.html).

Fortunately, there are many preventive strategies that child care programs can take to help lower the risk of COVID-19 exposure and spread during the day as outlined in this Toolkit.
Prevention Strategies

This Toolkit offers child care providers recommendations for implementing layered prevention strategies based on current COVID-19 trends in North Carolina.

Each section of the Toolkit has been organized into three categories that prioritize implementation of the strategies that have been shown to be most effective in lowering the risk of COVID-19 exposure and spread in child care settings.

- **Strategies that are REQUIRED** are based on existing North Carolina laws and child care rules and must be followed by all child care providers.
- **Strategies that SHOULD be implemented:**
  - These strategies, if not implemented, create conditions of high risk for COVID-19 exposure and spread.
  - **NCDHHS strongly advises that child care programs adopt all the strategies in these sections.**
- **Strategies that child care programs COULD CONSIDER adopting:**
  - These are strategies to provide additional layers of prevention and that, if implemented, will further reduce the risk of COVID-19 exposure and spread.

Child care providers should continue to consult with local public health officials about transmission and vaccine rates in their community to make operational decisions. Child care programs should consider developing a COVID-19 policy to inform staff and families of how they will plan to implement the guidance in this Toolkit.

Child care providers should continue to maintain awareness of:

- the effectiveness of their current policy
- any new restrictions by state or local public health leaders that are necessary to control the spread of the disease.
- **data trends** of COVID-19, vaccination coverage, screening testing, and occurrence of outbreaks to guide decisions on the level of layered prevention strategies.

Promoting Vaccination

The most effective way for individuals to protect themselves and their loved ones from COVID-19 is to get vaccinated and stay up-to-date with booster doses and/or additional doses. Evidence shows that COVID-19 vaccines are safe and effective at preventing COVID-19, including severe illness and death.

**Child care programs can promote vaccines by:**

- Encouraging children, staff and families, including extended family members who have frequent contact with children in the child care program, to get vaccinated and boosted as soon as they can.
- Notifying families that children ages 6 months and older are now eligible to be vaccinated. Share NCDHHS’s flyer with families [Protect Them from COVID-19](https://www.cdc.gov/coronavirus/2019-ncov/vaccines/booster-shot.html) flyer for more information.
- Encouraging parents to talk to their child’s pediatrician about the COVID-19 vaccine.
- Encouraging vaccine trust and confidence.
- Establishing supportive policies and practices that make getting vaccinated as easy and convenient as possible.
- Visiting [yourspotyourshot.nc.gov](http://yourspotyourshot.nc.gov) or call 1-888-675-4567 to find out where to get vaccinated against COVID-19 in the community and promote COVID-19 vaccination locations near the child care program.
- Identifying potential barriers unique to the workforce and implement policies and practices to address them.
- Finding ways to adapt key messages to help families and staff become more confident about the vaccine by using the language, tone, and format that fits the needs of the community and is responsive to concerns.
• Using the NCDHHS COVID-19 Vaccine Communication Toolkit to promote COVID-19 vaccination.
• Hosting information sessions to connect parents and guardians with information about the COVID-19 vaccine. Child care staff and health professionals such as Child Care Health Consultants can be trusted sources to explain the safety, effectiveness, and benefits of COVID-19 vaccines and answer frequently asked questions.
• Offering flexible, supportive sick leave options (e.g., paid sick leave) for employees to get vaccinated or who have side effects after vaccination. See CDC’s Post-vaccination Considerations for Workplaces for more information.

All child care programs should:
• Keep COVID-19 vaccination status on file for children and staff.

More CDC resources on vaccination:
• COVID-19 Vaccination Information
• COVID-19 Vaccines for Children and Teens
• COVID-19 Vaccine Toolkit for School Settings and Childcare Programs

Masks

Consistent and correct mask use adds a layer of protection for the wearer and others in their environment.

- NCDHHS no longer recommends universal mask requirements in schools or other lower risk settings like child care programs.
- Effective February 25, 2022, CDC no longer requires wearing of masks on buses or vans operated by public or private school systems, including early care and education/child care providers.
- Children and staff must wear a well-fitting mask, unless an exemption to mask use applies, following a COVID-19 infection upon return to child care for 10 days from
  - the day symptoms start (if person has symptoms)
  - the day of specimen collection for individuals with no symptoms.
- Children and staff should wear a well-fitting mask after a known COVID-19 exposure for 10 days after the last known exposure, unless an exemption to mask use applies.

Child care programs should:
- Recommend well-fitting masks in indoor settings for:
  - people who are not up-to-date on COVID-19 vaccines and
  - people at high risk for severe disease.
- Support any parents and children ages 2 years and older who choose to wear a mask.
- Support staff who choose to wear a mask. To facilitate learning and social/emotional development, staff may consider wearing a clear mask or a mask with a clear panel when interacting with young children, children learning to read, or when interacting with people who rely on reading lips.

Exemptions to mask use:
- children under age 2
- children between 2 and 5 who cannot wear a mask safely due to an inability to
  - wear a mask correctly
  - avoid frequent touching of the mask and their face
  - limit sucking, drooling, or having excess saliva on the mask
  - remove the mask without assistance
- children who are sleeping or anyone actively eating or drinking
- people who cannot wear a mask, or cannot safely wear a mask, for reasons related to a disability
- adults for whom wearing a mask would reate a risk to workplace health, safety, or job duty

Documentation of an exemption is not required.
When masks are worn by child care providers and staff in the workplace, the masks should meet one of the following criteria:

- CDC mask recommendations
- NIOSH Workplace Performance and Workplace Performance Plus masks

Cohorting and Physical Distancing

Maintaining physical distance is often not feasible in a child care setting, especially during certain activities (e.g., diapering, feeding, holding/comforting, etc.) and among younger children in general. When it is not possible to maintain physical distance in child care settings, it is especially important to layer multiple prevention strategies as described in this Toolkit to help reduce transmission risk.

**Cohorting**: Cohorting means keeping people together in a small group and having each group stay together throughout an entire day. Cohorting can be used to limit the number of children and staff who come in contact with each other, especially when it is challenging to maintain physical distancing, such as among young children, particularly in areas of moderate-to-high transmission levels. The use of cohorting can limit the spread of COVID-19 between cohorts but should not replace other prevention measures within each group.

**Child care programs are required to:**

- Allow parent/legal guardian access to the facility during its operating hours for the purposes of contacting the child or evaluating caregiving space and the care provided for the child, as described in 10A NCAC 09 .0205 and 10A NCAC 09 .1710.
- Allow Regulatory agencies access to the facility as required by 10A NCAC 09 .0201 and 10A NCAC 09 .1709.

**Child care programs should:**

- Ensure consistent cohorting by placing children and adults into distinct groups that stay together throughout the entire day.
  - If possible, child care groups should include the same children each day, and the same adults should remain with the same group of children each day.
  - Minimize or eliminate interaction between different groups or cohorts. Maintain at least 6 feet between children and staff from different cohorts.
- Allow access for:
  - Professionals who support children with special health care needs and/or behavioral/mental health needs to provide services and/or assessment.
  - Early intervention service coordinators and providers for children with Individualized Family Services Plans (IFSP)
  - Itinerant teachers and related service providers for children Individualized Education Plans (IEP)
  - Technical assistance providers.
- Allow water play, sensory play (such as rice, beans, or playdough activities), and sand play, for individual groups (cohorts) of children.

**Child care programs could consider:**

- Limiting non-essential visitors, volunteers and activities involving external groups or organizations with people who are not up-to-date on COVID vaccinations.
- Developing plans or procedures that maintain prevention strategies but allow:
  - family and staff to meet for orientation to the program
  - families to visit children.
• Prioritizing **outdoor activities**. When possible, physically active play should be done outside. Maintain cohorts if feasible in outdoor play spaces. Masks should not be worn when swimming or playing in water.

• Allowing off-premises activities. When off-premises activities occur, the procedures outlined in Child Care Rules [10A NCAC 09 .1005](#) and [10A NCAC 09 .1723](#); as well as all applicable guidance as described in the Transportation section of this toolkit MUST be followed.

It is also recommended that off-premises activities maintain groups (cohorts) of children and adults AND that the cohorts are not exposed to other groups of children or adults.

### Monitoring and Determining Exclusion for COVID-19

**Symptoms:** Children and staff who have symptoms of [COVID-19](#) should stay home and contact their health care provider or other available testing sites for diagnostic testing and care. Staying home when sick is essential to keeping infections out of child care settings and preventing spread to others.

The presence of any of these symptoms suggests the person may need to be tested for COVID-19:

- Fever (temperature 100.4 °F or higher) or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste of smell
- Sore throat
- Congestion or runny nose
- Diarrhea
- Nausea or vomiting

Individuals with the virus that causes COVID-19 may experience any, all, or none of these symptoms.

#### Identifying individuals with COVID-19

**Screening for symptoms**

Children and adults should be checked for symptoms at home, upon arrival at child care, and throughout the day. The presence of any of the symptoms above generally suggests a person has an infectious illness and should not attend child care, regardless of whether the illness is COVID-19.

**Testing**

COVID-19 testing can be performed by a health care professional - at a doctor’s office, health department, pharmacy, or other testing sites, including no-cost community events. At-home test devices allow an individual to test at home and get a result for a self-collected specimen.

Families and staff can order four (4) no-cost rapid antigen at-home COVID-19 tests to be sent to their residential address at [USPS.com](#).

Read more about testing for COVID-19 at the [Food and Drug Administration](#) and at the [CDC website](#).

**Testing for individuals who have symptoms**

Children and staff who have symptoms of [COVID-19](#) should stay home and contact their healthcare provider, use other available testing sites, or use at-home antigen tests for diagnostic testing for COVID-19.
Testing for individuals who have been exposed
Individuals who have been exposed to COVID-19 and have not developed symptoms should:

- Be tested on day 5 after exposure, unless the person tested positive for COVID-19 within the last 90 days.
- If the person develops symptoms, he/she should stay home and get tested immediately.
- The individual may also choose to test immediately upon notification of exposure to start isolation period sooner if the test is positive.
- Individuals can use a healthcare provider, other available testing sites, or use at-home antigen tests for testing for COVID-19.

Individuals who have had a COVID-19 infection in the last 90 days and develop symptoms should consult with health care provider about testing.

Child care programs are required to:

- Exclude children and adults from the child care facility who have tested positive for COVID-19. [Required by NC GS § 130A-144.]
- Immediately notify the local health department if they have reason to suspect that a person within the child care facility has COVID-19. Required by NC GS § 130A-136 and Communicable Disease Rule 10A NCAC 41A .0101 (50-52).
- Exclude children if:
  - The child has a fever taken by any method, including at armpit or orally:
    - A child older than two months has a temperature of 101 degrees Fahrenheit or higher.
    - An infant younger than two months has a temperature of 100.4 degrees Fahrenheit or higher.
  - Has two or more episodes of vomiting within a 12-hour period or
  - Has more than two stools above the child’s normal pattern and diarrhea is not contained by a diaper or when toilet-trained children are having accidents
  - Is unable to participate comfortably in activities.
  - Has symptoms that result in a need for care that is greater than the staff members can provide without compromising the health and safety of other children. [Required by North Carolina Child Care Rules 10A NCAC 09 .0804 and .1720(a).]

Child care programs should:

- Immediately isolate a person who develops COVID-19 symptoms during the day while at the facility and send him/her home as soon as possible.
- While waiting for a child who is sick or has tested positive for COVID-19 to be picked up, have a caregiver stay with the child in a place isolated from others and, if possible, ventilated to outside air.
  - If possible, a caregiver who is up-to-date on COVID-19 vaccinations should stay with the child in a place isolated from others.
  - If possible, allow for air flow throughout the room where the child is waiting by opening windows or doors to the outside.
  - Remain as far away as safely possible from the child (preferably 6 feet or more) while maintaining visual supervision.
  - Wear a mask and other personal protective equipment including disposable gloves and face shields, if available. If the child is over the age of 2 and can tolerate a mask, the child should also wear a mask, if available. Masks should not be placed on:
    - Anyone who has trouble breathing, or is unconscious, incapacitated, or otherwise unable to remove the mask without assistance or
Anyone who cannot tolerate a mask due to development, medical, or behavioral health needs.

Child care programs could consider:

- Allowing one family member to accompany his/her own child(ren) to and from the classroom at drop-off and at pick up, while limiting the amount of time spent in the building. Conducting a Health Check each day of the child in the classroom before the parent leaves, to determine whether the child has had any:
  - signs or symptoms of other illness or injury,
  - accidents, unusual events, or injuries,
  - mood or behavior changes.
- Maintaining a dedicated space to isolate people with symptoms who become ill during the day. That space should not be used for other purposes.

Exclusion from Child Care

Exclusion from child care for people with COVID-19 is required following the specific criteria listed in the table below, as required by NC GS § 130A-144.

Exclusion for people with COVID-19

- People with COVID-19 must be excluded from child care for 5 days after the first day of symptoms or date of COVID-19 test, if they have no symptoms.
- People may return to child care after 5 days if they have no symptoms or symptoms are improving and they have been fever free for 24 hours without use of fever reducing medications, but must continue to wear a mask for an additional 5 days to minimize the risk of infecting others, unless an exemption to mask use applies. The mask can be removed during sleeping, eating, and drinking.

Exclusion for people who are exposed to COVID-19:

NCDHHS recommends child care facilities no longer exclude individuals after an identified exposure to COVID-19 (regardless of location of exposure) unless they develop symptoms.

Although exclusion from child care is no longer recommended following an exposure, when an individual with COVID-19 is identified in the child care setting:

- Child care staff should notify staff and families of children who have been exposed so they can receive appropriate public health guidance, testing, and access to any resources that might be needed.
- Individuals who have been exposed should:
  - Wear a well-fitting mask for 10 days after the last known exposure, unless an exemption to mask use applies.
  - Be tested on day 5 after exposure, unless the person tested positive for COVID-19 within the last 90 days.
    - If the exposed person develops symptoms, he/she should stay home and get tested immediately.
    - The exposed person may also choose to test immediately upon notification of exposure to start isolation period sooner if the test is positive.

Although exclusion is no longer required statewide for people who have been exposed but have no symptoms, child care facilities may allow families to keep their asymptomatic children home for five days after an exposure if they choose to do so. Child care facilities should consider implementing policies that allow asymptomatic staff to stay home for five days after an exposure. This policy could include using Child Care Stabilization Grant funds to pay sick leave for the affected employee. Children and staff who develop symptoms should follow isolation guidance listed elsewhere in the Toolkit.
Local public health officials may continue requiring exclusion of exposed children and staff if determined necessary based on local conditions.

Adhere to the following criteria for allowing a child or staff member to return to child care:

**Summary Table for Returning to Child Care**

<table>
<thead>
<tr>
<th>Exclusion Category</th>
<th>Scenario</th>
<th>Criteria to return to child care</th>
</tr>
</thead>
<tbody>
<tr>
<td>Positive antigen test without symptoms</td>
<td>Child/staff person has tested positive with an antigen test (including an at-home antigen test) but does not have or develop symptoms of COVID-19.</td>
<td>If the child/staff person takes a repeat PCR/molecular test performed in a laboratory within 48 hours of his/her positive antigen test, and that PCR/molecular test is negative, the positive antigen test can be considered a false positive and the person can immediately return to child care; OR If the child/staff person does not take a repeat PCR/molecular test, or takes one within 48 hours and it is also positive, he/she can return to child care 5 days after the specimen collection date of the first positive test, as long as he/she did not develop symptoms. The person must continue to mask for an additional 5 days to minimize risk of infecting others, unless an exemption to mask use applies. Isolation should begin starting from the date of his/her first positive test. The person is not required to have documentation of a negative test in order to return to child care.</td>
</tr>
<tr>
<td>Positive PCR test without symptoms</td>
<td>Child/staff person has tested positive with a PCR/molecular test but the person does not have and does not develop symptoms.</td>
<td>Person can return to child care 5 days after the specimen collection date of his/her positive test as long as he/she did not develop symptoms. The person must continue to mask for an additional 5 days to minimize risk of infecting others, unless an exemption to mask use applies.</td>
</tr>
<tr>
<td>Positive antigen or PCR test with Symptoms</td>
<td>Child/staff person has symptoms of COVID-19 and has tested positive with an antigen test (including an at-home antigen test) or PCR/molecular test.</td>
<td>Child/staff person can return to child care when • He/she completes 5 days of isolation*; AND • It has been at least 24 hours since he/she had a fever (without using fever reducing medicine); AND • Other symptoms of COVID-19 are improving. The person must continue to mask for an additional 5 days to minimize risk of infecting others, unless an exemption to mask use applies. The person is not required to have documentation of a negative test in order to return to child care.</td>
</tr>
<tr>
<td>Symptoms without COVID-19 test or alternative diagnosis</td>
<td>Child/staff person has symptoms of COVID-19 but has not been tested for COVID-19 nor has visited a health care provider. Therefore, the person who has symptoms is presumed positive.</td>
<td>Child/staff person can return to child care when • He/she completes 5 days of isolation*; AND • It has been at least 24 hours since he/she had a fever (without using fever reducing medicine); AND • Other symptoms of COVID-19 are improving.</td>
</tr>
<tr>
<td>Exclusion Category</td>
<td>Scenario</td>
<td>Criteria to return to child care</td>
</tr>
<tr>
<td>-------------------</td>
<td>----------</td>
<td>---------------------------------</td>
</tr>
</tbody>
</table>
| Symptoms with negative COVID-19 test or alternative diagnosis | Person has symptoms of COVID-19 but has received a negative test for COVID-19* or has visited a health care provider and received an alternate diagnosis that would explain the symptoms of COVID-19. | Child/staff person can return to child care when  
  - It has been at least 24 hours since he/she had a fever (without using fever reducing medicine);  
  - Other symptoms improving for at least 24 hours. 
  
  Note: The health care provider is not required to detail the specifics of the alternate diagnosis. |

*In a person with symptoms, a negative test is defined as either (1) a negative PCR/molecular test or (2) a negative antigen test (including an at-home antigen test) if the person has a low likelihood of SARS-CoV-2 infection. 

**See CDC guidance for interpretation of antigen tests. 

For individuals with COVID-19, day zero (0) is:  
- the day symptoms start (if person has symptoms)  
- the day of specimen collection for individuals with no symptoms.

---

**Personal Protective Equipment**

Personal protective equipment (PPE) protects the person wearing it and those nearby from the spread of germs. When used properly, PPE acts as a barrier between germs found in blood, body fluids, or respiratory secretions and the wearer's skin, mouth, nose, or eyes.

Examples of PPE are:  
- disposable gloves  
- face shields  
- disposable procedural masks, N95, or KN95 masks  

PPE, other than masks, should be used only when necessary and should not be used with healthy children. Disposable PPE should be used by adults when caring for a child who, while in care:  
- starts showing symptoms of COVID-19  
- receives news of a positive COVID-19 test or diagnosis from a health care professional.  

PPE should also be worn when completing breathing-related health care procedures, such as nebulizer treatments (see below).

**Considerations for children who require asthma treatments**

It is uncertain, but possible, that giving nebulizer treatments to children in child care may increase the spread of COVID-19. During the COVID-19 pandemic, asthma treatments using inhalers with spacers should be used whenever possible and nebulizers should be avoided.

During the COVID-19 pandemic, if a child cannot use an inhaler with a spacer, the CDC recommends:  
- Only the child and the adult who is helping give the treatment should be in the room where the treatment is being given.
• The adult who is giving the treatment should be trained in medication administration, provided with proper PPE (gloves, disposable procedure masks and face shields) and be trained on:
  - when to use PPE
  - what PPE is necessary
  - where the PPE is stored
  - how to properly don (put on) and doff (take off) PPE, and
  - how to properly dispose of used PPE

After the nebulizer treatment, the separate room that was used should undergo cleaning and disinfection.

Cleaning and Hygiene

Requirements and recommendations for Cleaning and Hygiene have been updated to align with guidance from the Center for Disease Control and Prevention to prevent the spread of COVID-19. Continuing with good hand hygiene practices and routine cleaning/sanitizing/disinfecting routines based on child care and sanitation requirements will prevent the spread of all infectious diseases.

Child care programs are required to:

• Follow NCDHHS Environmental Health Section guidance for cleaning and disinfection recommendations.
• Follow North Carolina Child Care and Sanitation rules.

Child care programs should:

• Clean surfaces once a day, prioritizing high touch surfaces.
• If there has been a sick person or someone who tested positive for COVID-19 within the last 24 hours, clean and disinfect the space using an EPA-approved disinfectant for SARS-CoV-2 (the virus that causes COVID-19).

Child care programs could consider:

• Setting up hand hygiene stations at the entrance of the facility so that people can clean their hands before they enter. If a sink with soap and water is not available, provide hand sanitizer with at least 60 percent alcohol. Keep hand sanitizer out of children’s reach and supervise use.
  - Routinely check and refill/replace supplies to support healthy hand hygiene, such as soap, paper towels, tissues, and hand sanitizer with at least 60 percent alcohol for safe use by staff and older children.
  - Teach and reinforce adult and child handwashing with soap and water for at least 20 seconds.
• Encourage people to cough and sneeze into their elbows, or to cover with a tissue, and to avoid touching eyes, nose, and mouth.
• Brushing children’s teeth daily using the NC Toothbrushing Guidelines for Child Care Programs: Infant/Toddler and Preschool Classrooms. CDC also recommends:
  - For group brushing, stagger toothbrushing with smaller groups and promote physical distancing as much as possible. Clean and sanitize the table(s) between groups of children.

For additional recommendations for cleaning and hygiene, see the Center for Disease Control.

• Guidance for Cleaning and Disinfecting in Community, Work and School
• Guidance for Operating Child Care Programs during COVID-19
Transportation

Child care programs are required to:

- Follow [NC Child Care Rules 1000 - Transportation Standards](#).
- When in child care program transportation, children and staff must wear a well-fitting mask, unless an exemption to mask use applies, following a COVID-19 infection upon return to child care for 10 days from:
  - the day symptoms start (if person has symptoms)
  - the day of specimen collection for individuals with no symptoms.

Child care programs should:

- Keep children and staff who have symptoms of COVID-19, or have tested positive or been diagnosed with COVID-19, from boarding the transportation vehicle. Create a plan for getting children home safely who are not allowed to board the vehicle.
- Keep windows open while the vehicle is in motion to help reduce spread of the virus by increasing air circulation, if appropriate, safe, and weather permitting.
- Clean transportation vehicles regularly. Children should not be present when a vehicle is being cleaned.
- Clean frequently touched surfaces in the vehicle (e.g., surfaces in the driver’s cockpit, hard seats, arm rests, door handles, seat belt buckles, light and air controls, doors and windows, and grab handles).
- Keep doors and windows open when cleaning the vehicle and between trips to let the vehicles thoroughly air out.
- Clean equipment including items such as car seats and seat belts, wheelchairs, walkers, and adaptive equipment being transported to schools.
- Provide hand sanitizer (with at least 60% alcohol) to support healthy hygiene behaviors on all transportation vehicles for safe use by staff and older children.
- Hand sanitizer should only remain on transportation while the vehicles are in use.

Ventilation

Improving ventilation is an important COVID-19 prevention strategy that can reduce the number of virus particles in the air. Along with other preventive strategies, bringing fresh outdoor air into a building helps keep virus particles from concentrating inside.

Ensure ventilation systems operate properly and increase circulation of outdoor air as much as possible by opening screened windows and doors, using fans, or other methods. Do not open windows and doors if they pose a safety or health risk to people using the facility.

For more specific information about maintenance, use of ventilation equipment or plumbing, actions to improve ventilation and reduce hazards, consult with your local Environmental Health Specialist or refer to CDC guidance:

- Ventilation in Schools and Child Care Programs
- Ventilation FAQs
- Improving Ventilation in Your Home

Glossary

**Antigen Test:** Rapid antigen tests, which detect protein on the surface of the virus, are less sensitive than a PCR/molecular test. This means they miss some infections that would be detected by a PCR/molecular test. However, they can be performed without having to send the sample to a laboratory and results come back quickly (e.g., approximately 15 minutes). For this test, a sample may be collected through a nasal swab, and the test can be conducted inside a doctor’s office, or even at a community event that meets the right set of requirements. At-home antigen tests are also available.

**Asymptomatic:** Not showing any signs or symptoms of disease or illness. Some people without any symptoms still have and can spread the coronavirus. They're asymptomatic, but contagious.

**Close Contact:** Being within 6 feet of a person diagnosed with COVID-19 for a cumulative total of 15 minutes or more over a 24-hour period. See also Exposure.

**Cohort:** A group of non-overlapping children, teachers and staff who are designated to follow identical schedules. Keeping clear and distinct schedules helps limit the spread of COVID-19.

**Communicable:** Similar in meaning as “contagious.” Used to describe diseases that can be spread or transmitted from one person to another.

**Community Spread:** The spread of an illness within a location, like a neighborhood or town. During community spread, there’s no clear source of contact or infection.

**Confirmed Case:** Someone who tests positive for SARS-CoV-2, the virus that causes COVID-19, with a PCR, molecular test, or antigen test.

**Contact Tracing:** Formal contact tracing is identification, notification, and guidance given by local health authorities to individuals who have been exposed to someone who is contagious with COVID-19.

**Coronavirus:** A family of related viruses. Many of them cause respiratory illnesses. Coronavirus causes COVID-19, SARS, MERS, and other respiratory illness. The coronavirus that causes COVID-19 is officially called SARS-CoV-2, which stands for severe acute respiratory syndrome coronavirus 2.

**COVID-19:** The name of the illness caused by the coronavirus SARS-CoV-2. COVID-19 stands for “coronavirus disease 2019.”

The NC Department of Health and Human Services, in partnership with the North Carolina Psychological Foundation, created Hope4Healers, a confidential mental health support for early educators and child care staff who are on the front lines of the pandemic. The child care workforce is essential, both for NC families with young children and our economy. NCDHHS aims to support these individuals and their families with a timely, easily accessible helpline. The Hope4Healers helpline is staffed 24/7 with counselors trained in helping.

The child care workforce is essential, both for NC families with young children and our economy. NCDHHS aims to support these individuals and their families with a timely, easily accessible helpline. The Hope4Healers helpline is staffed 24/7 with counselors trained in helping.
Exclusion: An individual is not allowed to attend child care in person in order to isolate because they are, or are presumed to be, COVID-positive.

Exposure: Being in close contact with a person diagnosed (through lab-confirmed diagnostic testing, by a health care professional, or by at-home test) with COVID-19 while they are contagious. Individuals are contagious starting from 2 days before symptoms began (or, for asymptomatic individuals, 2 days prior to test specimen collection date) until they have completed isolation. See also Close Contact.

Incubation Period: The time it takes for someone with an infection to start showing symptoms. For COVID-19, symptoms appear 2-14 days after infection.

Isolation: When someone tests positive for COVID-19 or is presumed to be positive, they separate (isolate) themselves from others for 5-10 days to make sure they do not spread the virus.

Local Health Department: An administrative or service unit of local government concerned with health and carrying out some responsibility for the health of a jurisdiction smaller than the state.

Masks: Masks cover the wearer’s nose and mouth and are fitted properly to prevent leaks. May be:
- Cloth masks made from multiple layers of tightly woven breathable fabric
- Disposable masks, also known as surgical masks or medical procedure masks, made with multiple layers of non-woven materials
- N95 or KN95 masks, where available. Note: Specially labeled “surgical” N95 respirators should be prioritized for healthcare personnel.

Off-premises Activities: Any activity that takes place away from the child care premises (defined as: the entire child care building and grounds including natural areas, outbuildings, dwellings, vehicles, parking lots, driveways and other structures located on the property).

PCR/molecular Testing: Polymerase chain reaction (PCR)/molecular tests detect the virus’s genetic material. This test is the “gold standard” for detecting the virus that causes COVID-19 and typically requires a sample being sent to a laboratory. For this test, it is most common that samples are collected through a nasal swab.

Pandemic: When a new disease spreads to many countries around the world.

PPE: PPE stands for personal protective equipment. This includes masks, face shields, gloves, gowns and other coverings that help prevent the spread of infection to the wearer.

Presumed Positive: Person has symptoms of COVID-19 but has not been tested for COVID-19 nor has visited a health care provider.

Positive COVID-19 Test: An individual has taken a PCR/molecular COVID-19 test or an antigen COVID-19 test and the result is positive. This includes at-home tests.

Quarantine: Quarantine refers to the time spent away from other people by an individual who has been in close contact (within 6 feet for at least 15 minutes cumulatively over a 24-hour period) with someone who is positive with COVID-19. This is not the same thing as isolation, which is for someone who is positive with COVID-19.

Symptomatic: When a person shows signs or symptoms of illness.

Testing: Testing is used to diagnose cases of COVID-19. Anyone with COVID-19 symptoms, those who have been around others with symptoms or others who have tested positively, and high-risk members of the population should consider testing for COVID-19. The most common tests are the molecular/PCR test and the antigen test, both of which seek to determine whether or not a person currently is infected with COVID-19. The NCDHHS hosts testing sites regularly throughout the state.

Vaccinated:
- Fully vaccinated – individuals who have completed a primary series of COVID-19 vaccine are considered “fully vaccinated”:
  - 2 weeks after their second dose in a 2-dose series, like the Pfizer or Moderna vaccines, or
  - 2 weeks after a single-dose vaccine, like Johnson & Johnson’s Janssen vaccine
- Up-to-date – individuals are considered up-to-date who have completed both a primary series AND any additional doses and/or booster doses for which they are eligible. Unlike the primary series, individuals are considered “up to date” immediately after receiving a booster dose. For more information on who should receive booster and additional doses and when, see CDC.
Variant: Viruses constantly change through mutation and sometimes these mutations result in a new variant of the virus. Some variants emerge and disappear while others persist.
